

Amendments to the Claims:

Please amend claim 67. This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-66. (cancelled)

67. (previously presented) A method of treating chronic sinusitis, comprising the step of: nasally administering an aerosolized pharmaceutical composition to a mammal diagnosed or suspected of having chronic sinusitis, wherein:
the composition comprises betamethasone; and
a surfactant, wherein:
the composition is formulated for nasal administration as an aerosol; and
has a surface tension of about 10 to about 70 dynes/cm, wherein the surface tension is effective for deposition, penetration or retention of the composition in the nasal sinuses, whereby the aerosolized pharmaceutical composition is effective for treatment of chronic sinusitis.

68. (previously presented) The method of claim 67, wherein the composition is administered via a nebulizer having a nasal adapter.

69. (previously presented) The method of claim 68, wherein the nebulizer is connected to a compressor.

Claims 70-72 (Cancelled)

73. (previously presented) The method of claim 67, wherein the surfactant is selected from the group consisting of polyethylene glycol, sodium lauryl sulfate, sorbitan esters, polysorbates, tyloxapol or benzalkonium chloride.

74. (previously presented) The method of claim 67, wherein the pharmaceutical composition further comprises a second agent, wherein the second agent is selected from the group

consisting of an anti-histamine, a mast cell stabilizer, a non-antibiotic anti-microbial agent, an anti-leukotriene, an anti-viral, an antiseptic, a non-steroidal anti-inflammatory, a combination of at least two antibiotics, an agent for treating nasal polyps, an anticholinergic agent and combinations thereof.

75. (previously presented) The method of claim 74, wherein the second agent is an anti-histamine.

76. (previously presented) The method of claim 75, wherein the wherein the anti-histamine is selected from the group consisting of ethanolamine, ethylenediamine, alkylamine, phenothiazine, piperazine, cyproheptidine, azatadine, diphenylpyraline, ketotifen, terfenadine, fexofenadine, astemizole, and phenindamine.

77. (previously presented) The method of claim 76, wherein the ethanolamine is selected from the group consisting of diphenylhydramine, carbinoxamine, clemastine, phenytoxamine, doxylamine, dimenhydrinate, and bromodiphenhydramine hydrochloride.

78. (previously presented) The method of claim 74, wherein the second agent is a mast cell stabilizer.

79. (previously presented) The method of claim 78, wherein the mast cell stabilizer is selected from the group consisting of cromolyn or nedocromil sodium.

80. (previously presented) The method of claim 74, wherein the second agent is a non-antibiotic anti-microbial agent.

81. (previously presented) The method of claim 80, wherein the nonantibiotic anti-microbial agent is taurolidine.

82. (previously presented) The method of claim 74, wherein the second agent is an anti-leukotriene.

83. (previously presented) The method of claim 82, wherein the antileukotriene is selected from the group consisting of zafirlukast, montelukast, pranlukast, iralukast, and pobilukast.

84. (previously presented) The method of claim 74, wherein the second agent is a non-steroidal anti-inflammatory.

85. (previously presented) The method of claim 84, wherein the non-steroidal anti-inflammatory is selected from the group consisting of fenopropfen, flurbiprofen, ibuprofen, ketoprofen, naproxen, oxaprozin, diclofenac, etodolac, indomethacin, ketorolac, nabumetone, sulindac tolmetin meclofenamate, mefenamic acid, piroxicam and suprofen.

86. (Cancelled)

87. (previously presented) The method of claim 67, wherein the surfactant is a polysorbate.

88. (Cancelled)

89. (Cancelled)

90. (currently amended) The method of claim 67, wherein the surface tension is about 30 to about ~~50~~ 40 dynes/cm.

91. (previously presented) The method of claim 67, wherein the composition is formulated for administration via a nebulizer.

92. (previously presented) The method of claim 67, wherein the composition has an osmolality of about 150 mOsm/kg to about 880 mOsm/kg.

93. (previously presented) The method of claim 67, wherein the composition has an osmolality of about 300 mOsm/kg to about 880 mOsm/kg.

94. (currently amended) The method of claim 67, wherein the composition has an osmolality of about ~~400~~ 300 mOsm/kg to about 700 mOsm/kg.

95. (currently amended) The method of claim 67, wherein the composition has an osmolality of about ~~500~~ 400 mOsm/kg to about ~~600~~ 550 mOsm/kg.

96. (previously presented) The method of claim 67, wherein the surfactant has a hydrophile-lipophile-balance (HLB) of between about 1.8 to about 8.6.

97. (previously presented) The method of claim 67, wherein the surfactant has a hydrophile-lipophile-balance (HLB) of between about 9.6 to about 16.7.

98. (previously presented) The method of claim 67, wherein the composition has a pH of about 3.0 to about 8.5.

99. (currently amended) The method of claim 67, wherein the composition is an aerosol that comprises particles in the size range of about 1.0 to about 4.0 μm mass median aerodynamic diameter (MMAD)~~in diameter~~.

100. (currently amended) The method of claim 67, wherein the composition is an aerosol that comprises particles in the size range of about 0.5 to about 5.0 μm mass median aerodynamic diameter (MMAD)~~in diameter~~.

101. (currently amended) The method of claim 67, wherein the composition is an aerosol that comprises particles in the size range of about 2.0 to about 3.5 μm mass median aerodynamic diameter (MMAD)~~in diameter~~.

102. (currently amended) The method of claim 67, wherein the composition is an aerosol that comprises less than about 20% total particles having a mass median aerodynamic diameter (MMAD)~~diameter~~ of about 5 μm .

103. (currently amended) The method of claim 67, wherein the composition has an NaCl equivalency of about ~~1-1~~ 0.45% NaCl to about 1.8% NaCl.

104. (currently amended) The method of claim 67, wherein the composition has an NaCl equivalency of about ~~1-3~~ 0.9% NaCl to about 1.7% NaCl.

105. (previously presented) The method of claim 67, wherein the pharmaceutical composition is administered to the patient 1-3 times a day for a total of 14-21 days.

106. (currently amended) The method of claim 68, wherein the nebulizer delivers a majority of aerosolized particles in the size range of about 3-0 0.5 to about 3-5 10 µm mass median aerodynamic diameter (MMAD)~~in diameter~~.

107. (currently amended) The method of claim 68, wherein the nebulizer delivers a majority of aerosolized particles in the size range of about 1.0 to about 4.0 µm mass median aerodynamic diameter (MMAD)~~in diameter~~.

108. (currently amended) The method of claim 68, wherein the nebulizer delivers a majority of aerosolized particles in the size range of about 0-5 1.0 to about 5.0 µm mass median aerodynamic diameter (MMAD)~~in diameter~~.

109. (currently amended) The method of claim 68, wherein the nebulizer delivers a majority of aerosolized particles in the size range of about 2.0 to about 3-5 4.0 µm mass median aerodynamic diameter (MMAD)~~in diameter~~.

110. (currently amended) The method of claim 68, wherein the maximum number of particles delivered by the nebulizer over about 5.0 microns by mass median aerodynamic diameter (MMAD) is less than 20% of the total particles.

111. (Cancelled)

112. (previously presented) The method of claim 74, wherein the second agent is a combination of at least two antibiotics.

113. (previously presented) The method of claim 112, wherein the at least two antibiotics are selected from the group consisting of penicillins, cephalosporins, macrolides, ketolides, sulfonamides, quinolones, aminoglycosides, beta lactam antibiotics, and linezolid.
